

## Natural Resources Revenue Data

## Renewables Fact Sheet Fiscal Year (FY) 2020

## Geothermal and wind revenue

## Top 5 Locations

Location	Commodity	FY 20 Revenue	18 Year Trend
Nevada	Geothermal	\$ 9,080,640	
California	Geothermal	\$ 7,867,793	
Offshore Atlantic	Wind	\$ 5,226,756	
Utah	Geothermal	\$ 713,600	
New Mexico	Geothermal	\$ 123,581	
Total for all 11 states/regions		\$ 23,194,492	

## Geothermal and wind disbursements

For FY 20, **57%** of renewables disbursements went to states and counties and **43%** went to the U.S. Treasury.

Commodity	FY 20 Disbursements	5 Year Trend
Geothermal	\$ 16,783,371	
Wind	\$ 5,226,756	
Total	\$ 22,010,127	

## Geothermal production

## Electrical generation

The utilization of geothermal resources to generate electricity for sale, measured in mass (thousands of pounds), electricity (kilowatt hour), or other.

FY 20 Production	Electrical generation units	18 Year Trend
3,494,131,572	kilowatt hours	
2,118,207,362	thousands of pounds	

## Direct use

The utilization of geothermal for commercial, residential, agricultural, public facilities, or other energy needs other than the commercial production or generation of electricity, measured in volume (millions of gallons or hundreds of gallons) or thermal energy (millions of Btu).

FY 20 Production	Direct use units	18 Year Trend
299,887	millions of btus	
28,809,409	hundreds of gallons	
181,350,000	millions of gallons	

## Geothermal sulfur

Geothermal byproduct that is commercially recovered from produced geothermal fluids, measured in long tons.

FY 20 Production	Sulfur units	18 Year Trend
2,078	long tons	

This fact sheet includes geothermal and wind energy produced on federal and Native American lands. For more information, visit the [onshore](#) and [offshore](#) renewables pages.
