

## Natural Resources Revenue Data

## Renewables Fact Sheet Fiscal Year (FY) 2018

## Geothermal and wind revenue

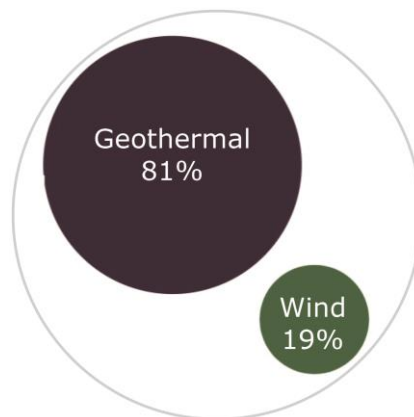

## Top 5 Locations

Location	Commodity	FY 18 Revenue	18 Year Trend
California	Geothermal	\$ 8,461,562	
Nevada	Geothermal	\$ 5,122,756	
Offshore Atlantic	Wind	\$ 3,309,234	
Utah	Geothermal	\$ 742,313	
Idaho	Geothermal	\$ 140,604	
Total for all 11 states/regions		\$ 17,987,940	

## Geothermal and wind disbursements

For FY 18, **60%** of renewables disbursements went to states and counties and **40%** went to the U.S. Treasury.

Commodity	FY 18 Disbursements	5 Year Trend
Geothermal	\$ 14,754,816	
Wind	\$ 3,511,440	
Total	\$ 18,266,256	

## Geothermal production

## Electrical generation

The utilization of geothermal resources to generate electricity for sale, measured in mass (thousands of pounds), electricity (kilowatt hour), or other.

FY 18 Production	Electrical generation units	18 Year Trend
3,118,919,253	kilowatt hours	
2,326,109,198	thousands of pounds	
276,331	other	

## Direct use

The utilization of geothermal for commercial, residential, agricultural, public facilities, or other energy needs other than the commercial production or generation of electricity, measured in volume (millions of gallons or hundreds of gallons) or thermal energy (millions of Btu).

FY 18 Production	Direct use units	18 Year Trend
232,225	millions of btus	
23,087,520	hundreds of gallons	
262,782,418	millions of gallons	

## Geothermal sulfur

Geothermal byproduct that is commercially recovered from produced geothermal fluids, measured in long tons.

FY 18 Production	Sulfur units	18 Year Trend
2,366	long tons	

This fact sheet includes geothermal and wind energy produced on federal and Native American lands. For more information, visit the [onshore](#) and [offshore](#) renewables pages.
